CHAS W REDDING

BOURNEDALE MASS

FEB 10 1930

*Bournedale**Import Division*

TO MY CUSTOMERS:—

GREETINGS.

It is with a great deal of pleasure that I present to you my 1930 catalog, it being my twentieth anniversary of growing the dahlia commercially.

There has been many wonderful improvements in the dahlia in that time. The immense, beautiful varieties produced today little resemble those of 1910. The cactus dahlia was but little known, there were no hybrid cactus or other hybrid types, and there were but a few giant decoratives or paeony flowered dahlias at that time.

The beautiful colors, wonderful formations and immense size has made it the most popular flower of today. No other flower will produce such a wealth of blooms, and do so from three to four months.

I wish you all could see my fields in bloom, especially my new seedlings. There are hundrds of wonderful new varieties that are well worth seeing, but of course only a few of the very best will ever be named and listed as there are so many wonderful new varieties being introduced each year.

The dahlia gardens are located in the southern part of the town of Plymouth, but our mail address is Bournedale.

Thanking you all for your generous patronage in the past and wishing you every success in the future, I am,

Yours very truly,

Chas. W. Redding.

spraying or dusting. A nicotine spray or dust will control these pests. They should be applied during the warmest part of the day and when the sun is shining. Start spraying or dusting when the plants are quite small as the pests are very small and do a lot of harm before discovered. It is better to get there first. A few good sprayings early will save a lot of trouble later.

DAHLIA STUNT

After many years of growing and experimenting with the dahlia I do not find any dahlia disease that we need to worry about. The dahlia stunt is a disease only in as far as lack of vitality is concerned, and that is easily overcome by planting only good healthy stock and taking good care of them. The greater part of the stunt is caused by insects that sap the vitality of the plants. The balance is lack of vitality caused by several minor things, as by planting over propagated stock, green plants or roots, by planting old mother roots, roots beginning to decay, roots badly dried up, or roots that have been over fed and forced to the limit to produce immense blooms for exhibition. By planting only strong healthy stock and carefully spraying the plants one should seldom find a stunted plant in their gardens. Once in a while a plant will suddenly stop growing and die and the cause will generally be found by digging up the root. Some insect or a mole has caused the trouble or the root has rotted, probably had started to rot at the time of planting but was not noticed.

CUT FLOWERS

When cutting flowers for decorations or exhibition, they should be cut late in the evening or early morning as they will keep longer if cut before the sun reaches them. Cut good long stems as the plant will be all the better for the pruning. Place in cold water in a cool place, removing all the lower leaves. When using a little salt in the water will help them to stay fresh longer. Also another method is to dip the stems into scalding water a few minutes and then place them in cool water until wanted. Remove all blooms from the plants when faded.

EXHIBITION FLOWERS

Allow only one stalk to grow to each root, and allow only one bud to grow on each branch. If only a few extra large flowers are wanted for exhibition, disbudding should be started as soon as the first buds appear. This will send all the strength of the new growth to the lower branches or laterals.

making vigorous growth that will produce longer stems before the buds start to grow. When these laterals begin to put out flower buds new shoots will begin to grow at every pair of leaves. These should be all removed except the last pair nearest the stalk. When the flower on each lateral has been removed the branch should be cut back to the new shoots which will then put out new laterals and flowers. After this allow all growth to develop, it will help in the maturing of the roots. When this method is used allow only four to six branches to grow on each plant, pinching out any others as they appear. It will be well to work a little fertilizer into the soil about the plants every two or three weeks.

DAHLIAS FROM SEED

Growing dahlias from seed is very interesting. All the wonderful new dahlias are produced in this way. There is a great deal of pleasure watching each flower open, knowing that every one will be different, and hoping each new one will be a beauty. The usual way recommended for planting dahlia seed is in doors or under glass, transplanting to small pots or flats when large enough to handle easily. They should be gradually hardened off before planting out in gardens. June first is plenty early.

I discarded this method as I found it required a great deal of time and labor and I was not satisfied with the results. Several years ago I started planting my seed in the open ground June first, quite thickly in rows three feet apart. There they grow undisturbed, except for cultivation, until digging time. I plant about 10,000 seed each year and find 75% bloom before frost. Those showing promise, large double flowers, having good stems and good colors are kept for further trial the following season as also are those that do not bloom. No fertilizers are used and but very little the second year. The third year only the very finest are kept and then they are cared for in the regular way. By this method and carefully selecting of seed year after year from only the largest and finest varieties I have produced many wonderful varieties, such as Mrs. Chas. W. Redding, Elizabeth (Lizzie) Ford, Oh-Henry, Red Sox, Miss Cape Cod, Worlds Champion, The Co-ed, Suner Six and many others that are well worth growing. When saving your own seed, save only from the best as mentioned above. It hardly pays to try for good seed until late in September or early in October as the large double dahlias do not set seed until late when they begin to show open centers. When purchasing seed, the question of

whether to buy hand pollenized seed or those crossed by the bees, one must decide for oneself. My experience with seed has proved to be 100% in favor of the bees. Experimenting with high priced Californian seed has been very costly and a total loss. I have never produced a dahlia from these seed that I have kept after the second year. The many letters I receive from customers telling me of their terrible dissappointments from their high priced, hand pollenized seed shows plainly that they are having the same results that I have had. California may be able to grow more seed than we can in the east but not better. I believe the best results can be had by selecting one's own seed or purchasing them as near by as possible. I greatly doubt that 10% of the new wonderful varieties introduced during the last few years are produced from hand pollenized seed.

PROPAGATING

I am not in favor of propagating by cuttings as it can be very easily over done to the injury of the stock. Many fine varieties have been so weakened by wholesale propagating that it is impossible to get good reliable stock of them. It is a quick way of increasing the stock of the new varieties and so is often over done. However many believe in it and probably no great harm would be done if not forced to the limit. To propagate by cuttings, start the clumps under glass in early spring and when sprouts are long enough to handle easily they should be cut off and rooted in sand. Water well at first and then keep them just wet enough to prevent wilting. When rooted transplant to small pots. It requires two or three weeks. Plants should be gradually accustomed to a cooler temperature before planting out.

DIGGING THE ROOTS

After frost has killed the plants they should be cut off close to the ground. Allow them to remain a few days before digging. Select a warm sunny day, digging them early and drying them most of the day in the sun before storing. Care must be taken when handling the roots as they are easily broken and are then a total loss. An unheated, frost proof, well ventilated cellar is the ideal place for storing, where they can be put away without packing. Heated cellars are more difficult as roots must be packed in some dry material, as sand or peat to keep from drying. A great many roots are lost by drying out each year. It is well to look them over during the winter and supply moisture if needed. A cold room off the cellar is often a good place.

SEPARATING THE ROOTS

This should be done in the spring a short time before planting. Each clump should be examined before cutting to find where it is best to cut. The eyes or sprouts are situated where the roots and stalk meet, and should be so separated that a small part of the stalk is attached to each root. If sprouts have not started they can be put in a light, warmer place and wet, when they will soon start to grow. Roots vary greatly in their manner of growth, some are very open and easily separated, others solid clumps that are harder to cut. These are easier to separate if cut in halves by cutting down through the stalk. One naturally wants to get as many from each clump as possible, so must study each clump to find how to cut to the best advantage. There are several kinds of knives and tools used for separating the clumps. I prefer a good pair of pruning shears although a good sharp knife is also needed at times. When cut they should be kept in a cool place until planting. When cutting it is a good plan to locate the old or mother root and throw it away.

FIELD GROWN ROOTS

I sell only field grown roots and guarantee each root to grow and prove true to name. It is my wish to give perfect satisfaction to every customer and request them to let me know when results are not as guaranteed. I can not make good a mistake if I do not know about it.

ORDER EARLY

Order as early as possible. Many of the newer varieties are sold out early in the season. Roots can be sent any distance with perfect safety. All roots are delivered free at catalog prices unless otherwise stated. Please use order sheet when ordering. I do not substitute unless requested.

REMITTANCES

Payment must accompany with order or before time of shipment. Remittances can be made in the form of P. O. Money Order, Express Money Order, Registered Letter or Personal Check. Small amounts will be accepted in U. S. postage stamps.

FREE ROOTS

When ordering, if customers will send me the names of a few friends who they think would be interested in my catalogue, I will remember them with some extras for their kindness.

LABELS

So many customers write me for labels that I keep a large stock on hand to supply them. These are sold in lots of 100 for \$1.00 or \$3.50 for 1000. Postage paid.

NAMED COLLECTIONS

For the benefit of customers not familiar with names of dahlia and wish me to make the selection for them, I make up the following collections. They are made up of the very best I can give for the price, and have always given perfect satisfaction. You are sure of good value and will be found listed at about double the price in the catalog. Names of varieties must be left to me, but can be had from any class or classes desired. Each root is labeled with name and is guaranteed. Prices as follows, 1 doz. all different for \$1.00, \$2.00, \$3.00, \$5.00 or \$10.00. One half of any collection at the same rate.

UNNAMED VARIETIES

In the handling of the roots many become mixed in one way or another and can not be sold as named varieties. These are all good growing roots. Any one wishing a good display of fine dahlias at low cost will find these very satisfactory. Price \$3.00 for 100 roots. Customer must pay the postage or express on these roots.

DAHLIA SEED

I sell but one grade of seed, selected from only very fine, double varieties. The same selected seed that I use myself. The stock is some what limited as I require a great many for my own plantings. The balance I sell for \$1.00 per package of 100 seed, good count.

Decorative Dahlias

ALBERT WARD 6ft. Fisher & Mason.
An enormous flower on extremely long,
bare stems, somewhat pendant. Color a
very fine light purple. One of the largest.

50c	50c

PAEONY FLOWERED DAHLIAS

BILLIONAIRE. 5½ft. Stillman.	GEISHA. 5ft. Hornsveld.
An immense flower of graceful formation. A great favorite with those that like the paeony flowered dahlia. Very free flowering. Color clear gold.	The showiest and most popular paeony dahlia. A large graceful flower of striking color, yellow shading to scarlet and to gold at the tips.
\$1.00	75c
BLUE BIRD. 5ft. Bessie Boston.	GORGEOUS. 5½ft. Bessie Boston.
An exceptional color of the deepest tone of lilac, which in certain lights has a bluish sheen. Large fine flowers on long stems well above foliage.	Well named as it is certainly a gorgeous flower. Color yellow and scarlet blended in a wonderful manner. Plants robust, its extra long cane-like stems holding its giant blooms erect.
50c	\$1.00
CARDINAL MERCIER. 5ft. Stillman.	GREAT EASTERN, R. 5ft. Redding.
An exhibition paeony of largest size and wonderful form. Color deep flesh-pink, suffused with canary yellow. One of the best of this class.	A model paeony of largest size and finest form. Color a lovely shade of rosy-lavender. Good stems.
\$1.00	\$1.00
CITY OF PORTLAND. 4ft. Chamberlain.	J. D. ROCKEFELLER. 4ft. Burpee.
A grand variety that is always admired for its giant size and wonderful form. Color bright yellow. The largest and finest yellow paeony dahlia.	An ideal flower for cutting. Medium size flower on straight stems. Color salmon-pink and amber.
\$1.00	35c
EDITH CAVELL. 4ft. West.	LAURA BARNES. 5ft. Wilmore.
Large flower of good form, many of the blooms coming double. Color old gold shaded reddish-bronze.	Color bright orange with a yellow center. One of the freest bloomers.
50c	50c
ELIZABETH BOSTON. 5½ft. Bessie Boston.	LADY CARDINE. 4½ft. Stillman.
Giant dahlia of great depth. Color crimson shaded gold at the tips. Erect on a long stem. A favorite.	A very showy variety of large size and attractive color, rich carmine-red, each petal tipped white to about half its length. Makes a fine display.
75c	\$1.00
EMPRESS OF ASIA. 3½ft. Stillman.	MAID OF JAPAN, R. 4ft. Redding.
Color deep golden-bronze. Large distinct variety. Free flowering.	An unusual dahlia that is always admired for its wonderful color and form. The color is a very attractive combination of red and yellow. This is really a single variety but owing to its formation I have always listed it as a paeony.
35c	\$1.00

ALL ROOTS DELIVERED FREE AT CATALOG PRICES

NAIAD.	5ft.	Wilmore.	SALMON QUEEN.	5ft.	Redding.
Color a delicate blending of cream and flesh-pink. Large and fine and upright on good stems.			A monster flower on long stems but slightly pendant. Color apricot-salmon with golden suffusions. Very fine.		
		35c			\$1.00
N. C. 4.	4ft.	Stillman.	SNOWMAN, R.	4ft.	Redding.
An unusual attractive blending of colors red, yellow and white. An excellent garden variety.			Color pure glistening snow-white. A giant flower of excellent formation. Petals very broad and waved.		
		75c			\$1.00
PEARL RUGGLES.	5ft.	Ruggles.	SUSAN COE.	3½	Burpee.
An artistic flower of wonderful grace and beauty. Color carmine-rose, suffused on a white ground, changing to a lighter shade on the outer edge of the petals. Large flower on an erect stem.			A splendid paeony of giant size. Many of its blooms are perfectly double here. The outer petals are a pleasing shade of rose-pink, shading to yellow at the center, suffused salmon. Blooms very erect on long straight stems.		
		\$1.00			50c
PEG O' ME HEART.	5½ft.	Marean.	TERCENTENARY, R.	5½ft.	Redding.
Different both in form and color, excellent for cutting. Color old-rose, with a golden suffusion.			An immense flower or original form, about the broadest, flattest flower grown. Color a beautiful combination of flesh-pink and cream. The outer petals are broad and flat, the inner petals very irregular and twisted and curled about the yellow center. The stems are pendant.		
		35c			\$2.00
PACIFIC GLOW.	4ft.	Burns.	THE ORIOLE.	3½ft.	Burns.
An extra large distinct flower. Color pink with buff shadings on center petals that twist and curl over the yellow center. Free flowering.			Color an attractive combination of burnt-orange and yellow, occasionally tipped white. This variety was introduced as a paeony flowered dahlia but in my fields most of the flowers are full centered hybrid cactus. A very beautiful flower.		
		75c			\$1.00

DARKNESS. 4ft. Keynes. The best dark red pompon to date. Stands very erect on long bare stems well above the foliage. 25c	LITTLE BEAUTY. 3½ft. Kunzman. Color clear light pink. A perfectly round ball with very closely quilled petals. Distinct and attractive. 25c
DAYBREAK. 3ft. Peacock. Very satisfactory pompon. Color a beautiful clear pink. 15c	LITTLE BELLE. 3½ft. Alexander. An excellent pompon of refined form and attractive color, a lovely shade of mauve. One of the feest flowering pompons, erect on perfect straight stems. 25c
GRAUSS AM WEIN. 2½ft. Cannel. A charming variety that is always admired for its distinct, beautiful color, a lovely crushed strawberry shade. 25c	LITTLE BESSIE. 3½ft. Peacock. One of the freest bloomers, erect on long stems for cutting. A perfect ball. Color creamy-white. 15c

LITTLE JENNIE. 3½ft. Stillman. A fine companion to little Bessie having the same form and habit of growth, but in color pale primrose yellow. 15c	NERISSA. 3ft. Turner. Color a beautiful silvery pink that appeals to every one. One of the very finest, a real gem that is always over sold. True stock is hard to get. 75c
LITTLE DUFFER. 4ft. Redding. Small variety of distinct color combination, amber and white in varying proportions, From all white to solid amber. 25c	PEE WEE. 2ft. Bessie Boston. One of the smallest pompons. Color soft yellow, the center shaded to brown. 25c
LITTLE PAL. 4ft. Redding. Free blooming variety on long stems. Color white tinted pink. 25c	PHOEBE. 3ft. Keynes. Very fine variety of striking color, yellow tipped deep orange. 25c
LITTLE GRETCHEN. 4½ft. West. A charming little variety, perfect in every way. Color pure white, distinctly tipped bright rose. 25c	RED HEAD. 4ft. Redding. A new red pompon of great merit. Its round ball-like flowers are borne in great profusion all season. 35c
LITTLE HERMAN. 3ft. Gill. Color deep maroon, tipped white, a very showy little flower. 35c	ROTHAUT. 2½ft. Merritt. Fine new red that is perfect in every way. Very small compact flowers on good stems of freest flowering habit. Color deep crimson-scarlet. 25c
MIDGET. 3ft. Stredwick. Color a lovely blending of salmon and peach shades. A tiny little flower of perfect form. One of the best. 25c	SUNSET. 2½ft. Keynes. Color clear orange scarlet, a very beautiful shade. An unusual fine variety for garden or cutting. 25c
NEATNESS. 2½ft. West. Color pale salmon shading to cream at the center. Choice little flower that is always admired. Free flowering. 25c	TOM THUMB. 2½ft. Pelicano. A new pompon of smallest size and finest form. Color garnet-red. 25c
NAUTILUS. 2½ft. Darnell. Color apricot shading to yellow at the center, a beautiful pompon. An excellent variety for cutting. 25c	TOMMY KEITH. 3ft. West. Color crimson with white tips. 25c
NELLIE FRAZER. 4ft. West. One of the best pompons, a small compact variety. Color light ground, edged and tipped with bright rose. 25c	VIVID. 3½ft. Turner. Color vivid scarlet. One of the freest flowering, fine for cutting. 15c

Number of feet following the names, is the average height of that variety as grown in my fields.

Names followed with the letter (R) are introductions of my own that have been registered.

Names of originator given where known.

Visitors welcome at all times. Do not fail to see the gardens when in bloom. Usually in bloom from the latter part of July until the middle of October.

When coming from the north or north west inquire for the Long Pond Road at Plymouth, from the south or south west inquire at Buzzards Bay or Bourne for Long Pond road and the same at Sagamore when coming from Cape Cod.

Cut flowers for sale during the blooming season.
